

Hello,

As an alternative to the ARRL proposal (RM-10867) for restructuring of the Amateur Radio Service I would also support the NCVEC proposal. While it eliminates the morse code testing requirement that some Hams still want retained, it simplifies the licensing structure. Many other countries have eliminated the morse code requirement and no ill effects are reported. I am indifferent to the retaining of the morse code testing for Extra Class licensees as proposed by the ARRL. Overall, I feel that the ARRL has the best proposal (RM-10867) followed by the NCVEC proposal.

Signed,

Philip A Covington
